IQMS DEFINES ENTERPRISE RESOURCE PLANNING (ERP) WITH ENTERPRISEIQ VERSION 7.6.1

More than 900 customer demand-driven enhancements available free to all existing IQMS maintenance customers

PASO ROBLES, CA –June 22, 2009 – IQMS, a leader in the design and development of manufacturing Enterprise Resource Planning (ERP) software, today announced the release of EnterpriseIQ 7.6.1, the latest upgrade to the company’s popular, single-source ERP software solution. All IQMS customers are eligible to receive a free upgrade to EnterpriseIQ 7.6.1. This newest and most advanced edition of EnterpriseIQ includes approximately 900 enhancements to meet the unique and varied needs of manufacturers in a rapidly changing global environment.

Building on its early success, EnterpriseIQ 7.6.1 delivers a robust and expansive single-source ERP software solution. This platform enables IQMS customers to more efficiently manage their entire product development cycle, not only isolated components, resulting in significant savings across the total cost of ownership and accelerating the delivery of higher quality and industry compliant products.

“IQMS is empowering its customers by continuing to offer innovative, practical and user driven solutions,” said Randy Flamm, president and founder of IQMS. “Our agile development team is dedicated to working with IQMS customers to push the boundaries on what a typical ERP system should offer for the successful management of increasingly complex global manufacturing operations.”

In less than one year, IQMS developed and deployed new demand-driven application features provided by EnterpriseIQ 7.6.1. Just some of the enhancements for expanded support, flexibility and efficiency are as follows:

- Enhanced Auto eForm Capabilities – For emailing reports, statements and invoices in an ongoing effort to reduce paper usage.

- New Reaction Injection Molding (RIM) Manufacturing Type Bill of Material (BOM) – Because one BOM does not fit all, the new RIM BOM is uniquely designed with calculations, specifications, and the terminology familiar to those in a RIM environment.
- Enhanced User Defined BOM Abilities – New user defined BOM groups can now be assigned with any one of the fifteen-plus pre-determined templates to make usage and implementation easier and quicker.
- Preventative Maintenance Labor Capacity Scheduling – Plan and allocate labor for preventative maintenance jobs to help determine capacity.
- Enhanced Security Capabilities in Setup and Maintenance – Create and assign security roles and groups to users for internal security management.

“We have been using IQMS for years. The company’s continuous ability to rapidly develop and deliver a comprehensive ERP solution is essential for us to remain competitive,” said John Cole, information technology director, Hitchiner Manufacturing, Inc. “Providing a technology package that continues to update as the industry changes reminds us of our smart decision on the purchase of EnterpriseIQ.”

About IQMS

Since 1989, IQMS has been a pioneer in the design and development of ERP software for repetitive, process and discrete manufacturing industries. Today, IQMS provides leading real-time manufacturing, accounting, production monitoring, quality control, supply chain, CRM and eBusiness solutions to the automotive, medical, packaging, consumer goods and other manufacturing markets. The innovative, single-source enterprise software solution, EnterpriseIQ offers complete functionality and scalable solutions all in a single database. With offices across North America, Europe and Asia, IQMS serves manufacturers around the world.
