IQMS Fixed Assets

Combining ERP and Financial Property Management

Improving Management and Tracking of Assets

Eliminate islands of information when your fixed asset system is part of your ERP suite. The IQMS Fixed Assets manager provides detailed asset tracking including accumulated depreciation and gain/loss detail, properly accounting for each asset during ownership and at disposal. Knowing exactly what you have could save you thousands or even millions of dollars in taxes and insurance costs.

The IQMS Fixed Assets manager is an important component of the IQMS suite and offers companies the unparalleled advantage of being embedded into the rest of your ERP package. Fixed Assets links to the IQMS general ledger and preventative maintenance tools. It includes depreciation calculations, customizable fields, multiple book options and more — offering you the functionality of third-party spreadsheets without the third party. As an added benefit, physical inventory of assets can be completed using handheld scanning to provide a seamless system for all your property tracking.

Create multiple property entries that can be calculated using various usage life values and purchase or acquisition costs. The benefit of specific GL accounts means postings are quick, easy and accurate.

Benefits

- Comprehensively track your property assets
- Manage the entire fixed asset life cycle including transfers and disposals
- Create general ledger journal entries directly
- Reduce research time by linking directly to Preventative Maintenance so you have all information stored under a single asset record
- Easily enter data for verification of assets by using Warehouse Management barcode scanning
- Eliminate time-consuming manual reporting as standard tax forms and reporting methods are fully supported

“Using Fixed Assets in IQMS has allowed us to eliminate another third-party spreadsheet system. This has streamlined the tracking of our assets considerably.”

IQMS Fixed Assets

Key Features

Detailed Asset Profiles- Provides a complete profile of each of your assets, including linking of documents (pictures, spreadsheets, etc.), maintenance history and accumulated depreciation history, along with itemized depreciation expense charges and retirement management.

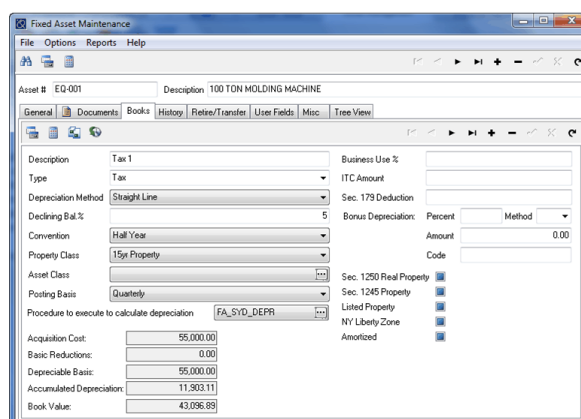

Multiple Books per Asset for Various Depreciation Methods- Allows tax rules and calculation of depreciation for multiple books (federal tax, internal and user-defined books). Applies calculation of depreciation expense and accumulated depreciation for various purposes, such as internal financial records or taxes.

Manage Assets by Group or Type- Group separate properties into one or more general asset accounts (GAAs). Then depreciate all the properties in each account as a single item or property. Fixed Assets also supports MARCS depreciation methods.

Depreciation Methods- Generally accepted depreciation methods are standard in the system along with user-definable depreciation calculations. Example of standard methods included in the system:

Straight Line Depreciation	Accumulated Current Earnings (ACE)
Units of Production	Alternative Depreciation System (ADS)
Declining Balance	Alternative Minimum Tax (AMT)
Double Declining Balance	Accumulated Current Earnings (ACE)
Variable Declining Balance	Accelerated Cost Recovery System (ACRS)
Sum of Years Digits	General Depreciation System (GDS)

Automated General Journal Entries- Once assets are set up, journal entries can be quickly prepared and posted. Entries for profit and loss upon disposition will also be made.

Multiple books and various depreciation methods are available and can be set to specific asset requirements.
