IQMS Payroll
Comprehensive Payroll Processing

A Complete System from Time Card Entry to Final Payroll Posting

The IQMS Payroll module is a complete payroll processing system within the enterprise resource planning (ERP) software. Supporting both United States and Canada payroll, the IQMS Payroll module allows you to enter time card hours or link to the Time & Attendance module for automatic data upload; add, edit and review pre-posted payroll details; print checks; process direct deposit output files following ACH standards; and post final payroll, all from one easy module.

The Payroll module supports multiple states and sites, unlimited employees, pay types and pay groups, deduction options like 401K matching, insurance and union dues and benefit options like accrual tracking. Yearly tax table updates are supplied by IQMS for automatic upload and you can generate federal, state and province tax forms with ease.
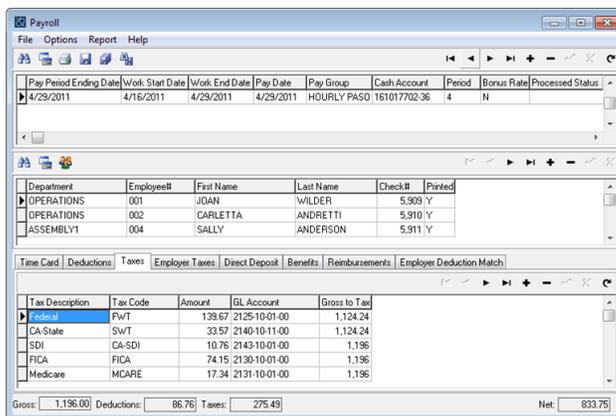

Additional features include an employee maintenance tab that allows you to view human resource and wage information for each employee, an enhanced payroll security feature for greater protection and payroll reports that track wage, benefit and tax history. Payroll works directly with other modules in your IQMS ERP suite and supports customization to meet all your unique payroll requirements.

Benefits
- Customize the module to meet your unique payroll requirements
- Track wage, benefit and tax history with built-in reports
- Link with other IQMS modules and eliminate redundant data entry
- View benefits, deductions, taxes and other employee information from one functional screen
- Direct deposit into multiple accounts
- Keep important employee information safe with enhanced security

"IQMS Payroll provides the flexibility we need for all our departments and the ease of use to quickly and accurately process checks and direct debits."
-Grizzle & Hunter

The Payroll module for IQMS is a complete payroll processing system. View pay periods, employee details, specific time card information, deductions, taxes, direct deposit and benefits particulars all on one functional screen.

IQMS Payroll

Key Features

Unlimited Entries for Multiple Sites- The Payroll module supports an unlimited number of employees, pay types, use-defined pay groups, deductions and benefits. Multiple site, state and country capability is also available.

Links to Other IQMS Modules- IQMS is a complete, single-database solution, so optional modules like Time & Attendance, Workforce and the Employee Self-Service Portal all talk directly to the Payroll module, eliminating redundant data entry and manual entry errors.

Employee Maintenance- Find all the general need-to-know employment information for each employee in one place, including pay rates, pay periods, posting accounts, tax exemptions, withholdings and deductions.
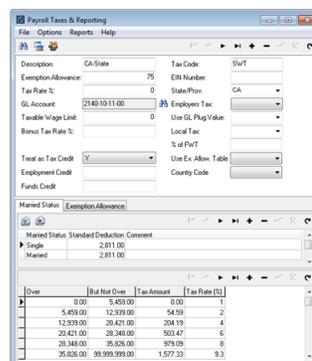

Direct Deposit- The Payroll module supports export file generation for direct deposit and electronic bank transactions in the ASCII format following ACH standards. Additionally, you can split the deposit into multiple accounts and print pay deposit statements.

Payroll Security- The enhanced payroll security feature allows access rights to be granted to specific pay groups by a database administrator.
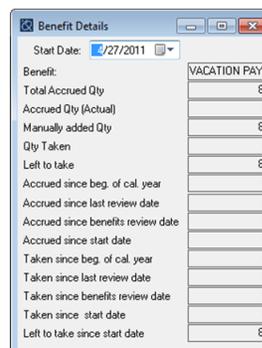

Tax Tables- Initial tax tables (federal and state) and annual updates are provided by IQMS. Import the tax tables automatically into the Payroll module or enter them manually. For IQMS EPlant users, the ability to report payroll taxes for multiple federal tax IDs is included.

Benefits and Deductions- View benefit history with previous year cloning capability and track all accrual fields such as total accrued, hours taken, time left to take, etc. Standard deductions are also easily tracked, including 401K contributions and possible company matching, insurance fees, union dues, garnishments, etc.

Reports and History- Extensive built-in reports help track wage, benefit and tax history.

Yearly tax tables are provided by IQMS and can be automatically uploaded into your system for accurate functionality.

Benefit details such as total vacation hours accrued, time taken and time left to take can all be tracked in the Payroll module. Roll this information into the Employee Self-Service Portal for easy employee visibility.
