PROJECT MANAGER

OBJECTIVE
Improving management and tracking of capital projects within ERP.

OVERVIEW
Thanks to DELMIAWORKS® Project Manager, project administration and tracking of capital equipment projects, such as tooling, has become considerably easier. Project Manager offers comprehensive support for all stages of a project — from initiation, planning and quoting to project execution and completion. Creating a task structure, assigning responsibilities, scheduling resources, defining deliverables and reporting progress involves a complex web of tasks and a myriad of challenges that are simplified with DELMIAWORKS Project Manager. Project Manager also gives you the tools to quickly analyze costs and prevent projects from getting out of control.

DELMIAWORKS Project Manager is embedded in the ERP system and has links to Quoting, Inventory, Purchasing, Time & Attendance, Preventative Maintenance (PM), Product Lifecycle Management (PLM) and to the financial system (AR/AP), tying all areas of a project together in a concise way. This allows analysis of the profitability of tooling and other machinery during the lifetime of that equipment.

**PROJECT MANAGER:**

**KEY FEATURES**

**Track Any Type of Project**
Any type of project, such as tool building, can be tracked. User-defined tasks and project templates allow for detail to be tracked to any level desired. The cloning of projects also saves time and effort in the project setup.

**Maintain Project Archives**
As projects are completed, they can be archived and removed from the active project list. All archived projects can be cloned, viewed onscreen or accessed by reports so history is maintained.

**Assign Labor**
Multiple ways to assign labor (Time & Attendance, quick add labor time cards, direct labor add) allows you to select the most efficient method of reporting labor to each task/project and ensures that all labor is accounted for.

**Consume Inventory**
Items from the main DELMIWORKS inventory module (or miscellaneous items) can be assigned to projects and consumed from inventory as the project progresses. As with all inventory items in DELMIWORKS, a complete history, including lot and price tracking, is maintained.

**Track Project Cost Activity**
The Activity Summary provides a complete picture of cost activity against the project, including standard versus actual costs, projected profit, profit margin, purchase orders, AP/AR and labor usage with single click drill-down to the details.

**Project Timeline Tracking (Gantt Charts)**
Tasks can be set up with start and end dates and tracked by percent completion to allow for quick views of project Gantt charts on the screen.
