OBJECTIVE
Combine ERP and equipment management to maintain tools easily and efficiently.

OVERVIEW
The DELMIWORKS® Maintenance, Repair and Overhaul (MRO) module provides all the essential tools to implement a complete maintenance program. MRO is designed to help protect your tools, machines, gages, devices and other equipment by automatically tracking usage and generating maintenance work orders. The maintenance labor scheduling capability allows for increased efficiency and reduced labor costs. Customizable tasks and templates make upkeep thorough, accurate and easy to maintain.

Designed cohesively within the DELMIWORKS ERP system, MRO links to Scheduling, Project Manager, Purchasing, Inventory, SPC, Quality Management and the financial system (AR/AP and Fixed Assets). Maintenance tasks are assigned to the equipment along with a time or usage interval, associated worker skill levels and material inventory requirements — all tailored to your environment. Equipment usage is captured automatically and calculates when maintenance is required or can be created manually for emergency or other needs. Best of all, time, inventory and other related costs offer a complete maintenance history.

Track equipment, tools and other assets through the DELMIWORKS Maintenance, Repair and Overhaul module. Manage tasks, usage intervals and inventory or labor requirements.

KEY BENEFITS
• Reduce equipment downtime through regular maintenance
• Reduce labor costs and increase efficiency by scheduling MRO labor
• Lower expenditures by reducing last-minute and emergency repairs
• Increase shop floor scheduling visibility to show maintenance downtime or out-of-service equipment
• Enter maintenance work orders directly from shop floor
• Easily create a complete audit trail for maintenance
• Streamline reporting of labor, spare parts usage and costs
• Reduce administrative tasks by automatically generating and printing work orders
• Accurately provide up-to-date financial information on equipment

As of January 2019, IQMS is becoming DELMIWORKS, joining the global manufacturing powerhouse Dassault Systèmes and its portfolio of innovative brands.
MRO:
KEY FEATURES

Record Equipment Information
Maintenance items can be machines, tools, inserts, dies, auxiliary equipment, gages, calipers, devices or any other item or activity that needs regular maintenance or service. Maintenance intervals can be tracked by days, hours or cycles.

Track MRO Task Details, Skills and Attached Inventory
Each task contains unique information as it pertains to the equipment, including skills and spare parts required, time to complete, recommended maintenance intervals, drawings, schematics and other information.

Automatically Generate Work Orders
Work orders can be generated automatically based on machine, tool or equipment usage. Work order history is maintained to provide a complete maintenance audit trail.

Schedule Work Orders/Take Equipment Out of Service
Work orders can be scheduled for downtime on specific machines. If equipment and tools are taken out of service, any and all departments can be notified that they are not available for production.

Labor Scheduling
Labor can be scheduled and planned by labor type based on MRO cells and labor capacity.

Track MRO Costs
Activity Summary provides a complete picture of cost activity against equipment, including purchase orders, AP/AR, labor consumed and materials used. Single click drill-down to the details is available.

Where Used Capability
Shows all bills of material and inventory items manufactured from machines, tools and auxiliary equipment to quickly identify which products may be affected by maintenance activities.

Links to Quality Module
Links to Corrective Actions, Engineering Change Orders and SPC are available for recording process information. Gage calibrations can also be tracked through MRO.
